

### MAKING DATA USEFUL, KEEPING INFORMATION SAFE

Since 2000 DOMA has focused on high volume document conversion and data extraction services designed to help organizations move toward digital transformation. Our goal is to capture static information and transform it into a usable digital resource for your business. This paired with our automated workflows and dynamic cloud software platform helps you unlock the hidden potential in your data.

A major part of delivering these services is offering end to end protection for your valuable business data. DOMA is consistently improving its security measures and adapting to meet the requirements of evolving compliance regulations.

*DOMA Technologies is trusted by the Federal Government to safeguard highly confidential information for the Veterans Administration, The Department of Defense (DoD), and many more federal agencies. We are compliant with the DoD Cloud Computing Security Requirements Guide (SRG) levels 2 & 4 as well as the Federal Information Security Management Act (FISMA).*

### Employee Training:

People are the first line of defense against cyber-attacks or data loss. Every member of our team receives yearly training that includes protecting HIPAA, PII, and PHI in addition to cyber-security best practices and specialized role-based training. Our high standards for protecting your information inform how we deliver all of our services.

### Document Conversion:

Your paper records are protected at every step of the digitization process. From our GPS monitored and speed tracked vehicles to our secure facilities with multiple, keycard access points, you can trust that your business information will remain secure when it's in our care. After scanning, we can return your records, destroy the documents, or offer protected off-site storage.

### DOMA DX Software Platform:

Customizable access controls in our DX software put you in charge of your data. DOMA DX allows administrators to partition user access, audit user actions, and track document creation or editing. High-level encryption safeguards data both during transmission and while at rest.

## Cloud Leader in Compliance & Security

DOMA leverages the Amazon Web Services (AWS) cloud to host our cutting edge DX Software and deliver our managed cloud services. This adds an additional layer of security and compliance to our services above and beyond what DOMA already offers.
